§1 SUDOKU INTRO 1

(See https://cs.stanford.edu/~knuth/programs.html for date.)

1. Intro. Mike Spivey announced a programming contest in February 2005, asking for a program that solves "sudoku" puzzles (which evidently appear daily in British newspapers). This program takes a sudoku specification in standard input and creates — on standard output — a file that can be piped into DANCE in order to deduce all solutions.

Brief explanation: Each possible placement of a digit corresponds to a row, column, and box where that digit does not yet appear. We want an exact cover of those rows, columns, and boxes.

Apology: I wrote this in a big hurry. But I couldn't resist the task, because it is such a nice application of exact covering.

```
#include <stdio.h>
    char buf [11];
    int row [9][10], col [9][10], box [9][10];    /* things to cover */
    int board [9][9];    /* positions already filled */
    main() {
        register int j, k, d, x;
        for (k = 0; \ k < 9; \ k++) \ Input row k 2\);
        \( Output the column names needed by DANCE 3\);
        for (j = 0; \ j < 9; \ j++)
        for (k = 0; \ k < 9; \ k++)
        if (\neg board[k][j]) \ Output the possibilities for filling column j of row k 4\);
    }
```

2. In a production system I would of course try to give more informative error messages about malformed input data. Here I simply quit, if the rules haven't been followed.

```
\#define panic(m)
         { fprintf(stderr, "%s!\n%s", m, buf); exit(-1); }
\langle \text{ Input row } k | \mathbf{2} \rangle \equiv
  {
    fgets(buf, 11, stdin);
    if (buf[9] \neq \'\') panic("Input|line|should|have|9|characters|exactly!\n");
    for (j = 0; j < 9; j++)
       if (buf[j] \neq '.') {
         if (buf[j] < 1, \forall buf[j] > 9, panic("Illegal_character_in_input! \n");
         d = buf[j] - 0;
         if (row[k][d]) panic("Two_lidentical_lidigits_lin_la_lrow!\n");
         row[k][d] = 1;
         if (col[j][d]) panic("Two_identical_idigits_in_a_column!\n");
         col[j][d] = 1;
         x = ((\mathbf{int})(k/3)) * 3 + ((\mathbf{int})(j/3));
         if (box[x][d]) panic("Two_identical_idigits_in_a_box!\n");
         box[x][d] = 1;
         board[k][j] = 1;
```

This code is used in section 1.

2 Intro sudoku  $\S 3$ 

First we print out all the positions, rows, columns, and boxes that need to be covered.  $\langle$  Output the column names needed by DANCE  $_3\rangle$   $\equiv$ for (k = 0; k < 9; k++)for (j = 0; j < 9; j ++)for (k = 0; k < 9; k++)for  $(d = 1; d \le 9; d++)$  { if  $(\neg box[k][d])$  printf  $(" \cup b%d%d", k, d)$ ;  $printf("\n");$ This code is used in section 1. 4. Then we print out all the possible placements. (Output the possibilities for filling column j of row  $k \neq 0$ )  $x = ((\mathbf{int})(k/3)) * 3 + ((\mathbf{int})(j/3));$ for  $(d = 1; d \le 9; d++)$  $\mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d]) \ \ printf( "p%d%d_{\sqcup} r%d%d_{\sqcup} c%d%d_{\sqcup} b%d%d \land n", k, j, k, d, j, d, x, d); \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d]) \ \ printf( "p%d%d_{\sqcup} r%d%d_{\sqcup} c%d%d_{\sqcup} b%d%d \land n", k, j, k, d, j, d, x, d); \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d]) \ \ printf( "p%d%d_{\sqcup} r%d%d_{\sqcup} c%d%d_{\sqcup} b%d%d \land n", k, j, k, d, j, d, x, d); \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d]) \ \ printf( "p%d%d_{\sqcup} r%d%d_{\sqcup} c%d%d_{\sqcup} b%d%d \land n", k, j, k, d, j, d, x, d); \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d]) \ \ printf( "p%d%d_{\sqcup} r%d%d_{\sqcup} c%d%d \land n", k, j, k, d, j, d, x, d); \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d]) \ \ printf( \neg row[k][d] \land \neg col[j][d] \land \neg box[x][d] ) \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] \land \neg box[x][d] ) \ \ printf( \neg row[k][d] \land \neg col[j][d] ) \\ \mathbf{if} \ (\neg row[k][d] \land \neg col[j][d] ) \ \ printf( \neg row[k][d] ) \ \ printf( \neg$ }

This code is used in section 1.
